Reduce costs, optimize efficiency, and advance your terminal...

Is your terminal operating at its true potential? Optimize your operations to witness nothing less extraordinary. The benefits that arise will startle you.

Optimization is a unique mechanism of the system that has been implemented to improve business processes, streamline operations, and maximize the utilization of available resources. TOPS Expert is also reputable for its true real-time architecture allowing for data to retain its integrity in any stage of planning. This means that any changes made to the data will update in the system accordingly, even if the same data is currently being used. Its real-time architecture leverages the advanced technologies integrated into TOPS Expert such as AI to help faster decision-making reach precision and are always at the optimum. An alleviation in errors which typically forms from manual planning mitigated as a result of the combination of TOPS Expert's architecture and modules providing autonomy and real-time data. Therefore, without real-time control and planning, AI and Automation are not possible, and hence, decisions cannot be made at an optimum free from errors. The built-in modules offered in TOPS Expert include berth optimization, CHE strategy optimization, resource, and process optimization.

Over many years, RBS has researched and developed software to render only the best solutions for terminals. We believe that including optimization-based modules in the TOPS Expert software to solve problems with greater complexity would provide value for terminals. It's time your terminal starts seeing real results.

Benefits of optimization

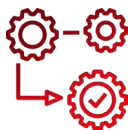

Forecasting Issues - Early detection of upcoming issues/constraints.

Improve Process Efficiency - Helps avoid vessel and resource waiting times and bottlenecks.

Reduce Costs - Forecasting resource use can help reduce the costs of using unnecessary resources.

Increase Operational Efficiency - Optimizing resources allows for better control and forecasting abilities as operations are streamlined.

Faster Decision-Making Process - Makes decisions automatically without any human intervention, which considerably reduces the likelihood of any errors from occurring.

Greater Adaptability - Allows you to react to risks and challenges in the terminal proactively.

Accurate Information - All decisions made in planning or operations use real-time data.

Performance Monitoring and Accountability - Optimization shares and tracks information across departments to deliver significant results.

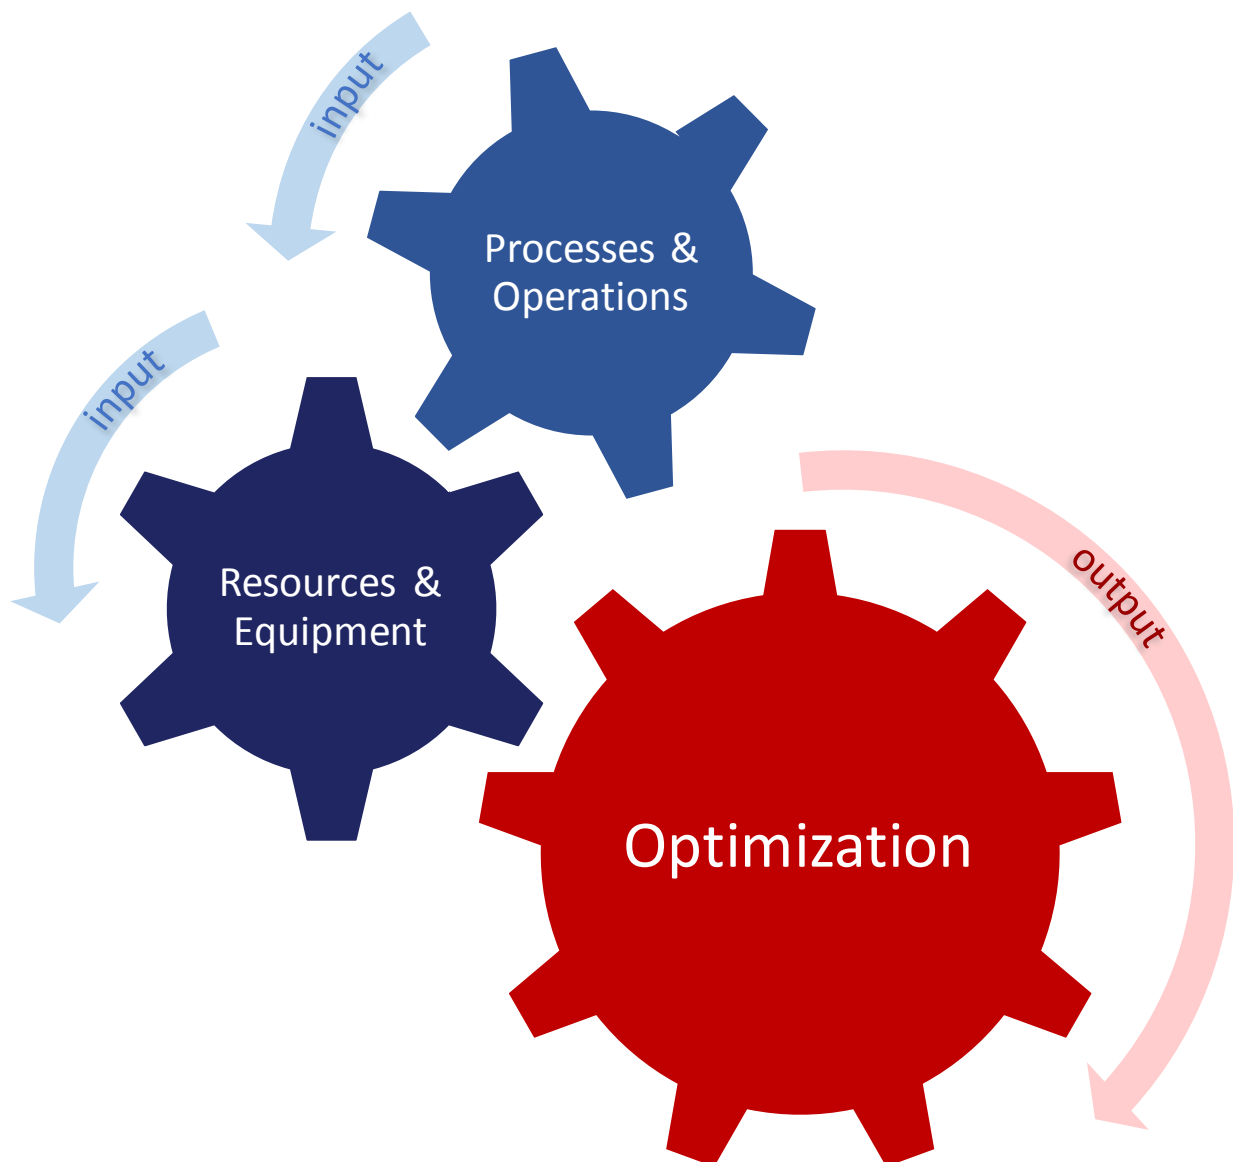

Transparency in Operations - All optimized scenarios reveal the set parameters accounted for, ensuring users know precisely the methods and steps taken to reach the decision.

Optimization

TOPS Expert optimizes terminal processes, operations, resources, and equipment by using a combination of advanced technologies like the Cloud, AI, and Automation.

TOPX Expert Optimization includes AI berth optimization, yard optimization, CHE strategy optimization, equipment optimization, automated equipment optimization, process optimization, operational optimization, resource optimization, optimization in the Cloud, and many more...

“The TOS has yielded great successes for our terminal and has guided us to find the best alternatives to improving operational efficiency at lower costs.”

*- CEO of Central Java
Region, TPKS Terminal*

Operating over 30 successful terminals for over 27 years
