The Only True Real-Time TOS

RBS TOPS has been renowned for being the first-ever real-time Terminal Operation System to hit the market in 1991.

Our proven solution has been developed and improved over many years to become the most advanced solution you know today as TOPS Expert Enterprise and Cloud. We have stayed true and close to our roots by advancing our real-time operating system into the first and entirely real-time TOS on the Cloud.

Many terminal operating systems available on the market adhere to a transaction process, which pulls data from multiple servers then loads information and uploads when an action is confirmed. As a result of this time-consuming method, transaction processing provides considerable leeway for errors and outdated information. Unlike these conventional systems, RBS remains the only TOS that entirely operates in real-time. The unique real-time architecture of RBS TOPS Expert makes the system highly reliable and helps improve terminal operations. It uses a parallel real-time user interface to enhance decision-making, provide forecasting abilities, and create 3D monitoring simulations. TOPO Expert updates container, vessel, and yard details in real-time to reduce data input errors and improve operational efficiency. TOPX Expert is the only real-time graphical container planning, monitoring, and control system available on the market. The TOPX real-time capabilities cover the complete terminal operation spectrum from planning, controlling, monitoring, equipment, automation, and many more... Together, these systems create TOPS which has wholly transcended the current terminal landscape by offering all its functionalities in the Cloud.

Features & Benefits

Faster real-time decision-making

Increased control with the availability of real-time data

Avoid delays by the unexpected reaction

3D real-time monitoring simulation

Parallel real-time User Interface

Forecasting capabilities

Improve planning, monitoring, and control of all operations

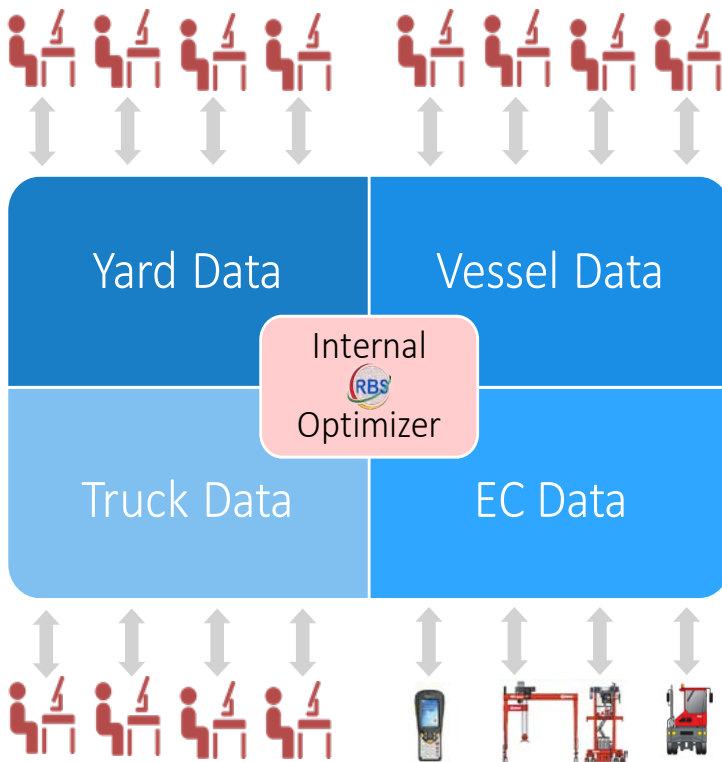

Maximum consumption of resources to ensure operational efficiency is reached at all times

24/7 performance with maximum output

TOPS Real-time Thin Client

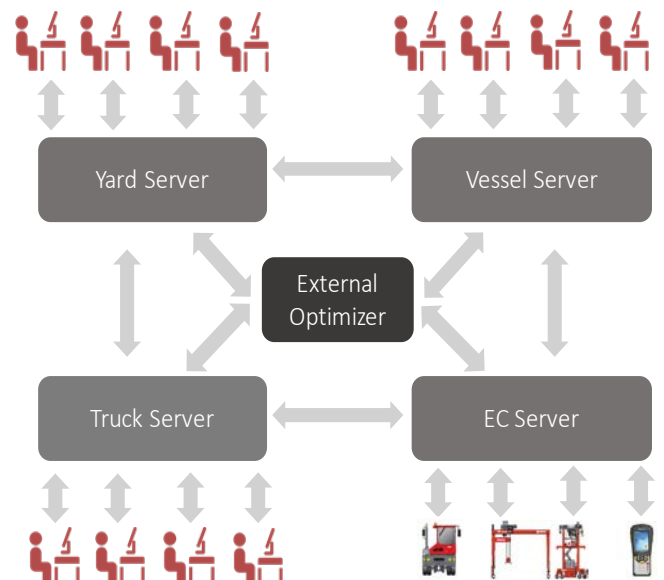

RBS TOPX Real-time Architecture

TOPS Expert is the only True real-time TOS due to its unique architecture.

TOPX Expert Enterprise and Cloud use parallel and in-memory processing, meaning that the data used is the most updated version, which reduces the likelihood of redundant data. TOPX Expert is a single-server application for real-time parallel processing. This avoids any data upload/download/transfer between multiple servers or workstations (as seen in other non-real-time TOS systems).

Other Non-real-time TOS Systems

“The unique real-time architecture of TOPS with rich functionalities, high reliability, performance has supported and improved our daily operation in our terminals.”

- Terminal Manager of Wan Hai Terminal

Operating over 30 successful terminals for over 27 years
